

Part II

1. Create a Bar Chart to plot the number of issues created for every repo for every day of the week; that is total number of issues created on Monday, Tuesday, Wednesday ..., Sunday for EVERY Repo name.

```
{
  'score': 0.04623311, '_type': 'issue', '_repo': 'elasticsearch', '_issueNumber': '107609', '_title': '[8.14] Fix `CONCURRENT_REPOSITORY_WRITERS` link (#107603)', '_createdAt': '2024-04-18T11:25:35Z', '_closedAt': '2024-04-18T12:29:03Z', '_body': 'Backports the following commits to 8.14:\n - Fix `CONCURRENT_REPOSITORY_WRITERS` link (#107603)'}
{
  'score': 0.04623311, '_type': 'issue', '_repo': 'elasticsearch', '_issueNumber': '107608', '_title': 'Cleanup unused test code in ScriptedMetricTests', '_createdAt': '2024-04-18T10:46:55Z', '_closedAt': '2024-04-18T12:40:12Z', '_body': 'Just a random find, this isn't used now that the parsed aggs tests are gone.\r\n"}
{
  'score': 0.04623311, '_type': 'issue', '_repo': 'elasticsearch', '_issueNumber': '107607', '_title': 'Move data stream lifecycle related actions to server', '_createdAt': '2024-04-18T10:39:03Z', '_closedAt': '2024-04-18T12:23:16Z', '_body': 'In order to be able to use the following actions in different modules without extending the data-stream module dependency, we move them to server.\r\n\r\nThis approach is already used by the other data stream actions.\r\n\r\nWe also change the scope of `DELETE_data_stream/{target}/_lifecycle` to internal in serverless.s.'}
{
  'score': 0.04623311, '_type': 'issue', '_repo': 'elasticsearch', '_issueNumber': '107606', '_title': 'ES|QL: Make TSDBRestEsqlIT more deterministic', '_createdAt': '2024-04-18T10:33:32Z', '_closedAt': '2024-12-31T00:36:30Z', '_body': 'Fixes https://github.com/elasticsearch/elasticsearch/issues/107557\r\n\r\nThe test fails quite consistently on Serverless (three nodes, vs. single node in stateful).\r\n\r\nMy understanding is that what matters here is the order of the series per single `k8s.pod.name`, but that the order of `k8s.pod.name`s is not strictly enforced by TSDB (I could be completely wrong though...)\r\n\r\n\r\n"}
{
  'score': 0.04623311, '_type': 'issue', '_repo': 'elasticsearch', '_issueNumber': '107605', '_title': 'Prioritize movement of write shards', '_createdAt': '2024-04-18T10:29:42Z', '_closedAt': '2024-04-18T12:29:22Z', '_body': 'This change enhances shard ordering in OrderedShardsIterator.\r\n\r\n\r\nPrior shards were ordered by node allocation recency. The ordering within the node was not explicitly defined.\r\n\r\nWith this change the data stream write index shards are prioritized within the node.\r\n\r\n\r\nIn case of the necessary shard movement, such shards will move first. This might be useful in case of the timeout for the node shutdown.\r\n\r\n\r\nIn case of rebalancing such shards are going to be moved last to minimize disruptions to the ongoing indexing.'}
```
